[Some scientific confirmations/explanations of the principles of operating of products Cora agrohomeopathie®: by each product site](#)

Code of product Cora agrohomeopathie®	Strengthening plants vitality and thus implicate, throughout plants own vitality / plants own resistance to:	On page:	Code of product Cora agrohomeopathie®	Strengthening plants vitality and thus implicate, throughout plants own vitality, plants own resistance to:	On page:
A3	Alternaria black spot (caused by the fungi Alternaria brassicae, alternata and A. raphani), also to other fungi Alternaria.	4	X12	Potatoe moth	21
A4	Bacterial rot.	5	X15	Harmful adult beetles, which place eggs on or just below of the surface of wooden tree trunks or more woody plant stems. Suitable for use for woody ornamental plants, fruit trees and plants with a partially woody stems. In combination with our product Cora agrohomeopathie X19, also strenghtening plants vitality and thus indirectly also plants own resistance to harmful beetles larvae in wood of woody ornamental plants, fruit trees and plants with a partially woody stems.	22
A6	Damage that may occur during transplantation.	6	X19	Mites (also red spider mite), vegetable&fruits flies, tripse, fleas beetles, various fruit flies, their larvae (for example, cherry flies, walnut flies). The exception is Drosophila suzukii and its larvae – for this we offer special and our own developed product with product code X 104). Various vegetable flies, their larvae (carrot flies, onion flies, leek flies, cabbage flies...); nematodes. In combination with our product X15: larvae in wood of woody ornamental plants, fruit trees and plants with a partially woody stems.	23
B1	Red snails.	7	X22	Suitable for plants, which grow too fast and for those, which grow too slow, which are weakned, also for plants, which grow in hard conditions. Suitable also for growing of spice plants.	24
B2	Strings.	8	X30	Botrytis.	25
B3	Harmful borers.	9	X31	Plants rust.	26
B4	Leaf aphids.	10	X32	Drought and to plant heat stress.	27

B5	Fruit moths, fruit borers.	11	X35	Plants injuries during wind or hail.	28
C4	Enhance the vitality of plants to grow more lush and more vital. It mainly affects to the healthier growth of plants, including the quality of crops and (for optimal size of crops. For use in kinds of crops, for which we still not offer particular special product.	12	X37	Plants mold and rot (vegetable).	29
C5	Harmful plants fungus and strengthening natural balance between plants and soil.	13	X39	Voies.	30
C6	Rooting by their decomposition in compost.	14	X57	Powdery mildew and downy mildew.	31
D1	Mice, rats.	15	X78	Different kinds of weevils.	32
X3	Various scale insects.	16	X79	All types of monilia (blossoms monilia, monilia of fruits).	33
X8	Apple blossom weevil.	17	X90	Fungus <i>Cylindrocladium buxicola</i> (buxus).	35
X9	Caterpillars.	18	X91	Buxus moths (<i>Cydalima perspectalis</i>) and their caterpillars.	36
X10	Night butterflies / meadow moths, which are agricultural pests (for instance <i>Helicoverpa zea</i> , <i>Ostrinia nubilalis</i>)	19	X104	<i>Drosophila</i> suzukii.	34
X11	Brassiac moth	20	Group of specific products for certain types of crops (pine fruits, vines, apple and pear, hops, cereals, brassica, corn, beans, potatoes, tomatoes, olives): X63, X64, X65, X66, X67, X72, X73, X75, X76, X77, X85, X86	Spraying with spray from them nurture plants and crops during the growing season. They strengthen the vitality of the plants and the quality of crops (taste, aroma, smell).	37-38

Code of product Cora agrohomeopathie®	A3	Some scientific confirmations/explanations of the principles of operating of products Cora agrohomeopathie®
Field of use	For strenghtening plants vitality and thus indirectly also plants own resistance to: Alternaria black spot (caused by the fungi Alternaria brassicae, A. alternata and A. raphani), also to other fungi Alternaria. Crops are also edible immediately after spraying, there is no withdrawal period. By preparing spray for spraying is needed to follow General instructions for product, which is attached to the product. Product is on Slovenian market also allowed in organic production.	
Product's specification data sheet	Available here	
The product is for now in sale on the following markets:	Slovenia	
Product classification - up to legislative requirements (Slovenian market)	Product for strengthening plants vitality and thus indirectly also plants own resistance to diseases, pests, plant 's stress to environmental impacts. Product for general use. In accordance with valid Slovenian legislation, the product does not need any other registration and for now does not have it. Product is in Slovenia NOT plant protection product (Regulation (EC) 1107/2009 of the European Parliament and of the Council concerning the placing of plant protection products on the market). Product is not registered as plant protection product; it's not mandatory needed for products for strengthening plants vitality and thus indirectly also plants own resistance to diseases, pests, plant 's stress to environmental impacts.	
Placed the product on the Slovenian market	The product is in Slovenia placed on the market as product for general use, which is attended for natural strenghtening plants vitality and thus indirectly also plants own resistance to diseases, pests, plant 's stress to environmental impacts. For use in agriculture: farming, gardening, home gardening.	
Certificate of conformity, conformity of the product for use in organic production	Certificate Issued by Institut for Organic farming, Faculty of Agriculture and Life Sciences, University Maribor, Slovenia/EU; The certificate of conformity of the product confirms the conformity of the product with the criteria / requirements of Council Regulation (EC) No 834/2007 and Commission Regulation (EC) 889/2008 and the Ordinance on Organic Production and Processing of Agricultural Products and Foodstuffs (Official Gazette of the Republic of Slovenia 8/2014). Certificat is available on web site www.cora-agrohomeopathie.com and also here .	
SAFETY WARNING:	The carrier medium of the energized natural ingredients is 43% ethanol (ie, is concentration of ethanol as is contained in certain spirits drinks..). Since the product is in Slovenia classified as a general-use product , 43% ethanol is considered a hazardous chemical because it is flammable. Therefore, the Safety Data Sheet for 43% ethanol , which is available on this link and also on the website www.cora-agrohomeopathie.com , should be taken into account. <u>This applies only to the product, but not to the spray that is prepared from the product with appropriate dilution with water accordingly to the General Instructions for Use of the Cora agrohomeopathie® products. So prepared spray is completely safe and without harmful effects for people, animals, the environment (concentrations of product in water for sprays are only from 0,1% to 0,3%. For farmers is recommended dosage 1 ml of product per 200 ml of water (= 0,1%) and 200 l of spray is enough for spraying surface of 1 hectare. For home gardeners is recommended dosage from 1ml to 3 ml product to 1 l of water.)</u>	
OPTION*	Per special custom requirement it's option, that is for carrier medium of the energized natural ingredients of product, is used 99,5% glycerol (1,2,3 – Propanetriol), which is for products for general use which NOT considered a hazardous chemical . Such option have non effects on products operation and effect, but have effects on production costs and products price for distributors. Here are available data about glycerol.	
Warning about the Slovenian names of our products:	In the whole name of the product for Slovenian market, random letters "CONTRA" and "NEGA" appear . I especially emphasizing that the word CONTRA on behalf of our products does not mean »against« (Slovenian word for »against« is »proti«). For Slovenian customers of our products, this is especially emphasized and appropriate explained on my Slovenian website. For other, who are interested in my EN web site, is available also this warning, which is publish also on our English web site .

Code of product Cora agrohomoepathie®	A4	Some scientific confirmations/explanations of the principles of operating of products Cora agrohomoepathie®
Field of use	<p>For strengthening plants vitality and thus indirectly also plants own resistance to bacterial rot. Vital plants are more resistant to diseases and pests. Many bacterial rot often affect mainly vegetables and ornamental plants. A variety of bacteria are always present in dead plant material, in water for watering, in the soil, etc. Infection is often caused by injuries caused by insects to plants. Vulnerable, vital weak, vitally weakened plants that are outside of their own (energy balance) are subject of infection. This is prevented by plant own vitality strengthening, while is thus implicit strengthen plant own resistance. The effect of the natural, energized, homeodynamic product Cora agrohomoepathie A4, on the energy level strengthens the balance of plants, strengthens their own vitality and consequently - through strengthening their vitality, also strengthens their own resistance to bacterial rot. Vital plants are more resistant to diseases and pests. Therefore, preventive use is recommended. By correctly and timely use of correct prepared spray from product Cora agrohomoepathie A4, the plants are more resistant to bacterial rot. Crops are also edible immediately after spraying, there is no withdrawal period. By preparing spray for spraying is needed to follow General instructions for product, which is attached to the product. Product is in Slovenian market also allowed in organic production.</p>

Code of product Cora agrohomoepathie®	B3	Some scientific confirmations/explanations of the principles of operating of products Cora agrohomoepathie®
Field of use	<p>For strengthening plants vitality and thus indirectly also strengthening plants plants own resistance to harmful borers. More vital plants are more resistance to plants pests (harmful borers in this case), harmful borers - they avoided such vital plants, and the result is that they do not put eggs on them.</p> <p><i>In cases of harmful borers larvae problem avoiding, is recommended combination of our products B3 and X19.</i> <i>In such case is needed activation of each product separately, as is for single product described in products General instruction. Than put activated dilution in sprayer together, fill appropriate amount of water and spraying per products General instruction.</i></p> <p>Appropriate for all kinds of plants cropping in farming, also in ornamental plants care – in case of larvae problems avoiding, there are exceptions of fruit trees, also plants with woody stems. For such cases we offer special product with code X15. Mode of action in this case: as described in the first sentence of this section.</p> <p>Recommended is already preventive use. Mode of action in this case: as described in the first sentence of this section.</p> <p>Crops are also edible immediately after spraying, there is no withdrawal period. By preparing spray for spraying is needed to follow General instructions for product, which is attached to the product. Product is also allowed in organic production.</p>	
Product's specification data sheet	Available here	
The product is for now in sale on the following markets:	Slovenia	
Product classification - up to legislative requirements (Slovenian market)	<p>Product for strengthening plants vitality and thus indirectly also plants own resistance to diseases, pests, plant 's stress to environmental impacts.</p> <p>Product for general use.</p> <p>In accordance with valid Slovenian legislation, the product does not need any other registration and for now does not have it.</p> <p><u>Product is in Slovenia NOT plant protection product</u> (Regulation (EC) 1107/2009 of the European Parliament and of the Council concerning the placing of plant protection products on the market). Product is not registered as plant protection product; it's not mandatory needed for products for strengthening plants vitality and thus indirectly also plants own resistance to diseases, pests, plant 's stress to environmental impacts.</p>	
Placed the product on the Slovenian market	The product is in Slovenia placed on the market as product for general use, which is attended for natural strengthening plants vitality and thus indirectly also plants own resistance to diseases, pests, plant 's stress to environmental impacts. For use in agriculture: farming, gardening, home gardening.	
Certificate of conformity, conformity of the product for use in organic production	<p>Certificate Issued by Institut for Organic farming, Faculty of Agriculture and Life Sciences, University Maribor, Slovenia/EU;</p> <p>The certificate of conformity of the product confirms the conformity of the product with the criteria / requirements of Council Regulation (EC) No 834/2007 and Commission Regulation (EC) 889/2008 and the Ordinance on Organic Production and Processing of Agricultural Products and Foodstuffs (Official Gazette of the Republic of Slovenia 8/2014).</p> <p>Certificat is available on web site www.cora-agrohomoepathie.com and also here .</p>	
SAFETY WARNING:	<p>The carrier medium of the energized natural ingredients is 43% ethanol (ie, is concentration of ethanol as is contained in certain spirits drinks..).</p> <p>Since the product is in Slovenia classified as a general-use product, 43% ethanol is considered a hazardous chemical because it is flammable. Therefore, the Safety Data Sheet for 43% ethanol, which is available on this link and also on the website www.cora-agrohomoepathie.com, should be taken into account. <u>This applies only to the product, but not to the spray that is prepared from the product with appropriate dilution with water accordingly to the General Instructions for Use of the Cora agrohomoepathie® products. So prepared spray is completely safe and without harmful effects for people, animals, the environment (concentrations of product in water for sprays are only from 0,1% to 0,3%. For farmers is recommended dosage 1 ml of product per 200 ml of water (= 0,1%) and 200 l of spray is enough for spraying surface of 1 hectare. For home gardeners is recommended dosage from 1ml to 3 ml product to 1 l of water.)</u></p>	
OPTION*	<p>Per special customer requirement it's option, that is for carrier medium of the energized natural ingredients of product, is used 99,5% glycerol (1,2,3 – Propanetriol), which is for products for general use which NOT considered a hazardous chemical. Such option have non effects on products operation and effect, but have effects on production costs and products price for distributors.</p> <p>Here are available data about glycerol.</p>	
Warning about the Slovenian names of our products:	<p>In the whole name of the product for Slovenian market, random letters "CONTRA" and "NEGA" appear. I especially emphasizing that the word CONTRA on behalf of our products does not mean »against« (Slovenian word for »against« is »proti«). For Slovenian customers of our products, this is especially emphasized and appropriate explained on my Slovenian website. For other, who are interested in my EN web site, is available also this warning, which is publish also on our English web site.</p>

Code of product Cora agrohomeopathie®	D1	Some scientific confirmations/explanations of the principles of operating of products Cora agrohomeopathie®
Field of use	<p>For strengthening plants vitality, plant's parts vitality and thus indirectly also plants, plant's parts own resistance to mice, rats.</p> <p>Energized natural homeodinamic effect of spray from product Cora agrohomeopathie D1, on energetic level naturally strengthens the vitality of sprayed plants and their crops, which indirectly - through strengthening the vitality of the plants - strengthening the resistance of plants and their crops to mice and rats. This is done by the plants themselves, when is sufficiently strengthened their own vitality and indirectly also their necessary own resistance to mice, rats. Such plants, parts of plants, crops, for mice and rats are not attractive, they do not like them for their food, because more vital plants are more resistant to pests and diseases. These rodents also avoid areas where we store such crops - because there is indeed no food for them. On such surfaces they do not stay or these surfaces also leave. The product can be used appropriately diluted with water, in the form of sprays on all types of plants and plantations, such as vegetables, arable crops, orchards, vineyards, ornamental plants, grasslands, greenhouses as well as in the storage of crops - therefore, where rats, rats causing problems, especially in conditions that are conducive to their too propagated (this is usually the ripening period, the time when we are harvesting our products, the time of changing the seasons, including weather disasters such as floods, unusual cold etc.). Crops are edible also immediately after spraying, there is no withdrawal period. By preparing spray for spraying is needed to follow General instructions for product, which is attached to the product. Product is also allowed in organic production.</p>	
Product's specification data sheet	Available here	
The product is for now in sale on the following markets:	Slovenia	
Product classification - up to legislative requirements (Slovenian market)	<p>Product for strengthening plants vitality and thus indirectly also plants own resistance to diseases, pests, plant's stress to environmental impacts.</p> <p>Product for general use.</p> <p>In accordance with valid Slovenian legislation, the product does not need any other registration and for now does not have it.</p> <p>Product is in Slovenia NOT plant protection product (Regulation (EC) 1107/2009 of the European Parliament and of the Council concerning the placing of plant protection products on the market). Code of product Cora agrohhomeopathie®	X12	Some scientific confirmations/explanations of the principles of operating of products Cora agrohhomeopathie®
Field of use	<p>For strengthening plants vitality and thus indirectly also plants own resistance to potatoe moth. The natural energized effect of using spray from the product Cora agrohhomeopathie X12 naturally strengthens the vitality of the potatoe plants, which indirectly - through the vitality of the potatoe plants - affects to the strengthening of the resistance of potatoe plants to potatoe moth. It works directly on plants, with naturally strengthening vitality of potatoe plants on the energy level, which indirectly strengthens the own resistance of potatoe plants to potatoe moth. Vital plants are more resistant to diseases and pests, so potatoe moths more avoid more vital potatoe plants; their larvae-caterpillars don't feed themselves with such plants, they starving, also to the end. Product should be properly diluted with water (accordingly to the General instruction for product), in the form of a spray used on potatoe plants. Therefore, it is best done the first cycle of spraying at the beginning of the vegetation period, when the vegetation begins, and the next cycles of spraying in the stages of appearance of potatoe moths/ their larvae (catterpillars). So, already preventive use is recommended.</p> <p>Crops are edible also immediately after spraying, there is no withdrawal period. By preparing spray for spraying is needed to follow General instructions for product, which is attached to the product. Product is also allowed in organic production.</p>	
Product's specification data sheet	Available here	
The product is for now in sale on the following markets:	Slovenia	
Product classification - up to legislative requirements (Slovenian market)	<p>Product for strengthening plants vitality and thus indirectly also plants own resistance to diseases, pests, plant 's stress to environmental impacts. Product for general use.</p> <p>In accordance with valid Slovenian legislation, the product does not need any other registration and for now does not have it.</p> <p>Product is in Slovenia NOT plant protection product (Regulation (EC) 1107/2009 of the European Parliament and of the Council concerning the placing of plant protection products on the market). Product is not registered as plant protection product; it's not mandatory needed for products for strengthening plants vitality and thus indirectly also plants own resistance to diseases, pests, plant 's stress to environmental impacts.</p>	
Placed the product on the Slovenian market	The product is in Slovenia placed on the market as product for general use, which is attended for natural strengthening plants vitality and thus indirectly also plants own resistance to diseases, pests, plant 's stress to environmental impacts. For use in agriculture: farming, gardening, home gardening.	
Certificate of conformity, conformity of the product for use in organic production	<p>Certificate Issued by Institut for Organic farming, Faculty of Agriculture and Life Sciences, University Maribor, Slovenia/EU;</p> <p>The certificate of conformity of the product confirms the conformity of the product with the criteria / requirements of Council Regulation (EC) No 834/2007 and Commission Regulation (EC) 889/2008 and the Ordinance on Organic Production and Processing of Agricultural Products and Foodstuffs (Official Gazette of the Republic of Slovenia 8/2014). Certificat is available on web site www.cora-agrohhomeopathie.com and also here .</p>	
SAFETY WARNING:	<p>The carrier medium of the energized natural ingredients is 43% ethanol (ie, is concentration of ethanol as is contained in certain spirits drinks..).</p> <p>Since the product is in Slovenia classified as a general-use product, 43% ethanol is considered a hazardous chemical because it is flammable. Therefore, the Safety Data Sheet for 43% ethanol, which is available on this link and also on the website www.cora-agrohhomeopathie.com, should be taken into account. <u>This applies only to the product, but not to the spray that is prepared from the product with appropriate dilution with water accordingly to the General Instructions for Use of the Cora agrohhomeopathie®products. So prepared spray is completely safe and without harmful effects for people, animals, the environment (concentrations of product in water for sprays are only from 0,1% to 0,3%. For farmers is recommended dosage 1 ml of product per 200 ml of water (= 0,1%) and 200 l of spray is enough for spraying surface of 1 hectare. For home gardeners is recommended dosage from 1ml to 3 ml product to 1 l of water.)</u></p>	
OPTION*	<p>Per special customer requirement it's option, that is for carrier medium of the energized natural ingredients of product, is used 99,5% glycerol (1,2,3 – Propanetriol), which is for products for general use which NOT considered a hazardous chemical. Such option have non effects on products operation and effect, but have effects on production costs and products price for distributors.</p> <p>Here are available data about glycerol.</p>	
Warning about the Slovenian names of our products:	<p>In the whole name of the product for Slovenian market, random letters "CONTRA" and "NEGA" appear. Code of product Cora agrohomoepathie®	X32	Some scientific confirmations/explanations of the principles of operating of products Cora agrohomoepathie®
Field of use	<p>For strengthening plants vitality and thus indirectly also plants own resistance to drought and to plant heat stress.</p> <p>Through so vitalized plants, indirectly at the energy level are also strengthened hydrophobic capacities of dust particles in the soil, which absorb air humidity. Natural strengthening of the vitality of plants at the energy level is reflected in their physical vitality and indirectly also in their strengthened resistance. More vital plants are more resistant to plant stress, disease, and pests. We recommend preventive use of spray from product X32, which may be done before beginning of hot, dry weather conditions. However, it is best to begin to strengthen the plants at the beginning of the vegetation period; more vital plants are some better prepared to demanding growing conditions; than repeat spraying cycles regarding to situation. Normally on 2-3 months, if very demanding heat and drought conditions occur or longlasting, repeat spraying cycle immediately, also in shorter intervals.</p> <p>Crops are edible also immediately after spraying, there is no withdrawal period. By preparing spray for spraying is needed to follow General instructions for product, which is attached to the product. Product is also allowed in organic production.</p>	
Product's specification data sheet	Available here	
The product is for now in sale on the following markets:	Slovenia	
Product classification - up to legislative requirements (Slovenian market)	<p>Product for strengthening plants vitality and thus indirectly also plants own resistance to diseases, pests, plant's stress to environmental impacts. Product for general use.</p> <p>In accordance with valid Slovenian legislation, the product does not need any other registration and for now does not have it. Product is in Slovenia NOT plant protection product (Regulation (EC) 1107/2009 of the European Parliament and of the Council concerning the placing of plant protection products on the market). Product is not registered as plant protection product; it's not mandatory needed for products for strengthening plants vitality and thus indirectly also plants own resistance to diseases, pests, plant's stress to environmental impacts.</p>	
Placed the product on the Slovenian market	The product is in Slovenia placed on the market as product for general use for strengthening plants vitality and thus indirectly also plants own resistance to diseases, pests, plant's stress to environmental impacts.	
Certificate of conformity, conformity of the product for use in organic production	<p>Certificate Issued by Institut for Organic farming, Faculty of Agriculture and Life Sciences, University Maribor, Slovenia/EU;</p> <p>The certificate of conformity of the product confirms the conformity of the product with the criteria / requirements of Council Regulation (EC) No 834/2007 and Commission Regulation (EC) 889/2008 and the Ordinance on Organic Production and Processing of Agricultural Products and Foodstuffs (Official Gazette of the Republic of Slovenia 8/2014). Certificat is available on web site www.cora-agrohomoepathie.com and also here .</p>	
SAFETY WARNING:	<p>The carrier medium of the energized natural ingredients is 43% ethanol (ie, is concentration of ethanol as is contained in certain spirits drinks..).</p> <p>Since the product is in Slovenia classified as a general-use product, 43% ethanol is considered a hazardous chemical because it is flammable. Therefore, the Safety Data Sheet for 43% ethanol, which is available on this link and also on the website www.cora-agrohomoepathie.com, should be taken into account. <u>This applies only to the product, but not to the spray that is prepared from the product with appropriate dilution with water accordingly to the General Instructions for Use of the Cora agrohomoepathie® products. So prepared spray is completely safe and without harmful effects for people, animals, the environment (concentrations of product in water for sprays are only from 0,1% to 0,3%. For farmers is recommended dosage 1 ml of product per 200 ml of water (= 0,1%) and 200 l of spray is enough for spraying surface of 1 hectare. For home gardeners is recommended dosage from 1ml to 3 ml product to 1 l of water.)</u></p>	
OPTION*	<p>Per special customer requirement it's option, that if carrier medium of the energized natural ingredients of product, is used 99,5% glycerol (1,2,3 – Propanetriol), which is for products for general use NOT considered a hazardous chemical. Such option has non effects on products operation and effect, but have effects on production costs and products price for distributors.</p> <p>Here are available data about glycerol</p>	
Warning about the Slovenian names of our products:	<p>In the whole name of the product for Slovenian market, random letters "CONTRA" and "NEGA" appear. I especially emphasizing that the word CONTRA on behalf of our products does not mean »against« (Slovenian word for »against« is »proti«). For Slovenian customers of our products, this is especially emphasized and appropriate explained on my Slovenian website. For other, who are interested in my EN web site, is available also this warning, which is publish also on our English web site.</p>

Code of product Cora agrohomeopathie®	X35	Some scientific confirmations/explanations of the principles of operating of products Cora agrohomeopathie®
Field of use	<p>For strengthening plants vitality and thus indirectly also plants own resistance of plants to plants injuries during wind or hail. On often occurring drastic weather phenomena, such as wind and hail, plants may suffer major or minor damage. Non-resistant crops, plants with weak resistance, are more susceptible to this, and by damaged of their vitality, by weakened of their own resistance, they become even less own resist, become more susceptible to plant diseases, plant pests, growth disorders, etc. Using the spray from product Cora agrohomeopathie X35, the vitality of the plants strengthening, and through it (indirectly, through the strengthening of the vitality of the plants), also strengthening own resistance of plants to mechanical damage, to plants stress. More vital plants are more resistant to plants stress, diseases and pests, so are also some less susceptible to possible mechanical damage. Strengthening plants own immunology enables both: more vital plants are more resistant to plants stress and mechanical damage, as well as they have some advantages in case of possible injuries: while they grow more rapidly, they may recover more easily after possible injuries (in less damage and when plants are still alive). It is, therefore good that the plants are so well-prepared for possible weather events that have occurred in recent years, more or less every year. We advise preventive use of the spray from the product X35- the spray cycle begins at the beginning of the vegetation period, and after that, spraying cycles continue for 2-3 months, if necessary more often (regarding to actual conditions). Crops are edible also immediately after spraying, there is no withdrawal period. By preparing spray for spraying is needed to follow General instructions for product, which is attached to the product. Product is also allowed in organic production.</p>

Code of product Cora agrohomeopathie®	X104	Some scientific confirmations/explanations of the principles of operating of products Cora agrohomeopathie®
Field of use	<p>For strengthening all kind of fruits plants vitality and thus indirectly also plants own resistance to Drosophila suzukii and their larvae. Products have effects directly on plants, on their energy level, this is reflected on the physical level as more vital, more own resistant plants (in this case on Drosophila suzukii). Preventive use is recommended- start spraying with spray from product Cora agrohomeopathie X104, when begins favorable conditions for the Drosophila suzukii fly. Vital plants are more resistant to pests and diseases. Drosophila suzukii avoids more vital fruits. If you miss out on timely spraying and the fly begins with the disposal of eggs, after spraying with Cora agrohomeopathie 104, quite soon stop drilling into fruits, stop feeding, starve, even to the end. But if you missed ontime preventive stage for this sprinkling, you may be sorry... We have seen lot of examples of successes using sprays from this product in cherries, strawberries, raspberries, grapes, peaches ... It's great that this product is completely without withdrawal period!</p> <p>More vital plants are more resistance to plants pests, plants diseases, plants stress.</p> <p>Crops are edible also immediately after spraying, there is no withdrawal period. By preparing spray for spraying is needed to follow General instructions for product, which is attached to the product. Product is also allowed in organic production.</p>
